Minimal increase in events at 2 years

■ % Difference of Incidence between 1 & 2 year follow-up
■ Incidence at 1 year follow-up

n=2334 Lesions & 1907 Patients

Key Takeaways

EASTBOURNE Registry is the world's largest SCB study in CAD till date, showing promising 1 & 2 year outcomes in real-world patients. There was no significant increase in the events at 2 years indicating that SCB maintains safety at long term. MagicTouch SCB is extensively evaluated with 16 sub-studies in multiple cohorts & 30+ publications with some in process.
