Evaluation of Safety and Efficacy of Sirolimus Coated Balloon in Coronary Artery Disease

Prospective, Multicenter study evaluating clinical safety and efficacy of Sirolimus Coated Balloon in the "Real World".

COMPLEX PATIENT COHORT

45.3% Diabetes Mellitus

53% De Novo Lesion

47% ISR

53% ACS

PRINCIPAL INVESTIGATOR – DR. SAMEER DANI

3 Year Long Term Clinical Outcomes*

6 Month Clinical Endpoint*

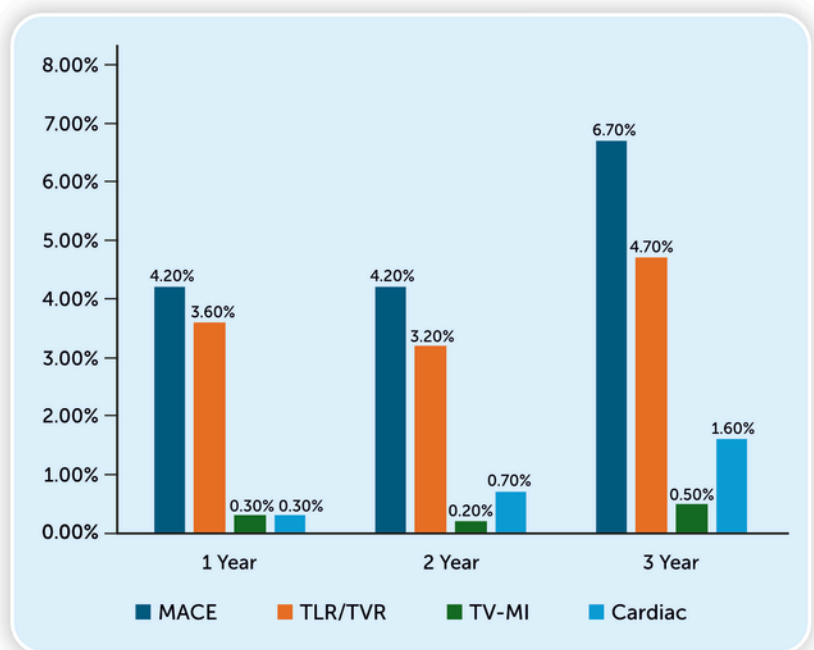

Procedural Success
99.6%

MACE Composite of
3.3%

TLR/TVR
2.9%

TVMI
0.2%

Cardiac Death
0.2%

Key Takeaways

Long-term clinical outcomes revealed lower MACE rates with TLR, TV-MI and Cardiac deaths in the real-world patients, showing MagicTouch SCB as promising alternative for treatment of coronary artery disease.
